

Positive voltage regulators

Feature summary

- Output current to 0.5A
- Output voltages of 5; 6; 8; 9; 10; 12; 15; 18; 20; 24V
- Thermal overload protection
- Short circuit protection
- Output transition SOA protection

The L78M00 series of three-terminal positive regulators is available in TO-220, TO-220FP, DPAK and IPAK packages and with several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type employs internal current limiting, thermal shut-down and safe area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 0.5A output current. Although designed primarily as fixed voltage regulators,

these devices can be used with external components to obtain adjustable voltage and currents.

Table 1. Absolute maximum ratings

| Symbol | Parameter | | Value | Unit |
|-----------|--------------------------------------|------------------------|--------------------|------|
| V_I | DC Input voltage | for $V_O = 5$ to $18V$ | 35 | V |
| | | for $V_O = 20, 24V$ | 40 | |
| I_O | Output current | | Internally Limited | mA |
| P_D | Power dissipation | | Internally Limited | mW |
| T_{STG} | Storage temperature range | | -65 to 150 | °C |
| T_{OP} | Operating junction temperature range | | 0 to 150 | °C |

Note: Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied

Figure 16. Fixed output regulator

1. To specify an output voltage, substitute voltage value for "XX".
2. Although no output capacitor is need for stability, it does improve transient response.
3. Required if regulator is locate an appreciable distance from power supply filter.

Figure 17. Constant current regulator

$$I_o = V_{XX}/R_1 + I_d$$

Figure 18. Circuit for increasing output voltage

$$I_{R1} \geq 5 I_d$$

$$V_o = V_{XX}(1 + R_2/R_1) + I_d R_2$$

Note: The circuit performs well up to 100 KHz.

Figure 27. Adjustable output voltage with temperature compensation

Note: Q_2 is connected as a diode in order to compensate the variation of the Q_1 V_{BE} with the temperature. C allows a slow rise time of the V_O .

6 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
