FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

Critical Precautions on FPCAP itself

1. Polarity

The FPCAP has polarity. Consequently, make sure polarity is never reversed when using. If polarity is reversed, leakage current could increase or lifetime could decrease.

2. Applied Voltage

Under no circumstances can reverse voltage be applied. It may cause a short circuit.

3. Sudden charge and discharge

Keep sudden charge and discharge to a minimum. It may create a short circuit or cause high leakage current. In this case, it is recommended to use a protection circuit in order to maintain high reliability. Regardless, using protection circuit to ensure reliability is recommended when the rush current value exceeds 10A. Please make sure to insert a protection resistor of about $1\text{k}\Omega$ for charge and discharge when measuring the leakage current.

4. Soldering

The soldering conditions must be kept within the permissible range prescribed in the catalog specification. If the specification is not kept, there is the possibility of abnormal appearance and abnormal leakage current and reduced capacitance.

5. Installation on PC board

When designing the layout of your PC board using the FPCAP please take into consideration the standard mounting specifications. The FPCAP can not be able to be mounted on a PC board if there is insufficient space.

6. Directions for use in circuits

Since leakage current fluctuations can occur during the soldering process the FPCAP cannot be used in the following circuits.

- (1) High impedance voltage retention circuits
- (2) Coupling circuits
- (3) Time constant circuits
- (4) Circuits greatly affected by leakage current
- (5) Connecting two or more FPCAP in series

General Precautions at Designing, for Use and Handling

1. Circuit design precautions

(1) Check the rated performance

After checking the operation and installation environments, design the circuit so that it falls within the rated performance range stipulated in the catalog specification.

(2) Operating temperature and ripple current

- a) Set the operating temperature so that it falls within the range stipulated in the catalog specification.
- b) Do not apply current that exceeds the allowable ripple current in the catalog.

(3) Leakage current

Even when the soldering conditions fall within the range of the catalog specification, the leakage current increases slightly. It also increases slightly during high temperature no-load, moisture-proof no-load and temperature cycling tests with no voltage applied.

In cases such as these, leakage current will decrease by applying voltage in conditions below the maximum operating temperature.

(4) Applied voltage Considerations

- a) Make sure the sum of the peak DC voltage and ripple voltage values does not exceed the rated voltage.
- b) Please do not apply the reverse voltage to **FPCAP**.
- c) When the DC voltage is low, please check whether the peak value of ripple voltage does not become a reverse voltage.

(5) Reduction of failure stress

The main failure mode of the **FPCAP** is in the open mode primarily caused by an electrostatic capacitance drop. Random short circuit mode failures occur rarely.

The time it takes to reach the failure mode can be extended by using the **FPCAP** with reduced ambient temperature, ripple current and applied voltage.

(6) Capacitor insulation

- a) Insulation is not guaranteed.
- b) Be sure to completely separate the case, negative electrode terminal and positive electrode terminal from adjacent components and PC board traces.

(7) Operating environment

Do not use the **FPCAP** in the following environments.

- a) Places where it can come into direct contact with water or salt water and places where condensation may form.
- b) Places filled with noxious gasses such as: hydrogen sulfide, sulfuric acid, nitrous acid, chlorine, ammonia, etc.
- c) Places exposed to ozone, ultraviolet rays and radiation.
- d) Where severe vibration or shock which exceeds the condition specified in the specification sheets.

(8) Assembly Conditions Considerations

In designing a circuit, the following conditions should be checked before the **FPCAP** is mounted on the PC board.

- a) The pitch and diameter of PCB holes to which the **FPCAP** is mounted, shall be designed in conformance with the dimensional tolerance stipulated in the catalog specifications.

(9) PC board

Avoid locating heat-generating components around the **FPCAP** and on the underside of the PC board under the **FPCAP**.

(10) Parallel connection

When used in a parallel connection with another capacitor, carefully select the type of capacitor.

(11) Other

- a) Electrical characteristics are affected by fluctuations in temperature and frequency.
- b) When mounting the **FPCAP** on a double-sided PC board, design the board so that extra PC board holes are not located underneath the **FPCAP**.

2. Mounting precautions

(1) Things to know before mounting

- a) Do not reuse the **FPCAP** that has already been assembled in a device and energized.
Excluding the **FPCAP** that has been removed for measuring electrical characteristics during a periodic inspection, they cannot be reused.
- b) Leakage current may increase if the part has been stored for a long period of time.
In this case, use after voltage treatment under the rated voltage.
- c) There are non-halogen types of flux that do not contain ionic halides, but contain many non-ionic halides.
When these non-ionic halides infiltrate the capacitor, they also cause a harmful reaction.
Use soldering flux that does not contain non-ionic halides, also ionic halides.

(2) Mounting-1

- a) Mount after checking the capacitance and the rated voltage.
- b) Mount after checking the polarity.
- c) Do not drop on the floor and do not use parts that have been dropped.
- d) Do not deform and then mount.

(3) Mounting-2

- a) Mount after checking the match between the lead pitch and the PC board holes pitch.
- b) When an automatic insertion equipment is used to clinch the lead wires, make sure it is set correctly.
- c) Be careful of the shock force that can be produced by the automatic insertion equipment.
- d) Do not apply excessive external force to the lead wires, the **FPCAP** itself, or the electrode terminals.

(4) Soldering with a soldering iron

- a) Set the soldering conditions (temperature, time) so that they fall within the range stipulated by the catalog specification.
- b) When the lead wire terminal must be processed because the terminal spacing and the PC board holes spacing do not match, process it before soldering so that no stress is applied to the **FPCAP** itself.
- c) Do not subject the **FPCAP** itself to excessive stress when soldering with a soldering iron.
- d) When a soldering iron is used to repair the **FPCAP** that has already been soldered once and needs to be removed, do it after the solder has been completely melted so that no stress is applied to the **FPCAP** terminals.
- e) Do not let the tip of the soldering iron touch the **FPCAP** itself.
- f) The amount of leakage current after soldering may increase a slightly (from a few μA to several hundred μA) depending on the soldering condition (preheating and solder temperature and time, PC board material and thickness, etc.)
The leakage current can be reduced by applying voltage.

(5) Flow soldering (Radial lead type)

- a) Never submerge the **FPCAP** in molten solder. Use the PC board to protect the **FPCAP** and only solder the opposite side of the board that the **FPCAP** is mounted on.
- b) Set the soldering conditions (soldering temperature, terminal submersion time) so that they fall within the range stipulated by the catalog specification. The amount of leakage current after soldering may increase slightly (from a few μA to several hundred μA) depending on the soldering conditions (preheating and solder temperature and time, PC board material and thickness, etc.). The leakage current can be reduced through self-repair by applying voltage.
- c) Take care that flux does not adhere to any place other than the terminals.
- d) When soldering, take care that other components do not fall over and touch the **FPCAP**.
- e) Flow soldering under extremely abnormal conditions may reduce the capacitance of products before or after soldering.

(6) Reflow soldering (SMD type)

- Do not use reflow soldering for Radial lead type (Through Hole).
- a) Never submerge the **FPCAP** in molten solder. Use the PC board to protect the **FPCAP** and only solder the opposite side of the board that the **FPCAP** is mounted on.
- b) Set the soldering conditions (soldering temperature, terminal submersion time) so that they fall within the range stipulated by the catalog specification. The amount of leakage current after soldering may increase slightly (from a few μA to several hundred μA) depending on the soldering conditions (preheating and solder temperature and time, PC board material and thickness, etc.). The leakage current can be reduced through self-repair by applying voltage.
- c) Take care that flux does not adhere to any place other than the terminals.
- d) When soldering, take care that other components do not fall over and touch the **FPCAP**.
- e) Reflow soldering under extremely abnormal conditions may reduce the capacitance of products before or after soldering.
- f) Do not use VPS (Vapor Phase Soldering).

Precautions

(7) Handling after soldering

- a) Do not tilt, bend or twist the **FPCAP** after it has been soldered on the PC board.
- b) Do not use the **FPCAP** as a handle to move the PC board after it has been attached to it.
- c) Do not bump the **FPCAP** with objects after it has been soldered to the PC board. Make sure the **FPCAP** does not touch other PC boards or components.
- d) Do not subject to excessive stress after it has been soldered to the PC board.

(8) Washing the PC board

Check the following items before washing the PC board with these detergents; high quality alcohol-based cleaning fluid such as Pine- α ST-100S, Clean-thru 750H, 750L, 750K, or Techno Care FRW14 through 17; or detergents including substitute Freon such as AK-225AES and IPA.

- a) Use immersion or ultrasonic wave to clean for a total of less than five minutes.
- b) The temperature of the cleaning fluid should be less than 60°C.
- c) Watch for contamination of the detergent (conductivity, pH, specific gravity, water content, etc.).
- d) After cleaning do not store in a location subject to gases from the cleaning fluid or in an airtight container.

Dry the PC board and the **FPCAP** using hot air (less than the maximum operating temperature).

- e) Please contact our company for details about detergents and cleaning methods, and about detergents other than those listed above.

(9) Fixatives and coatings

- a) Select appropriate material for the **FPCAP** marking material and sealant.
In particular, make sure the fixative, coating and thinner do not contain acetone or toluene.
- b) Before applying a fixative or coating, completely remove any flux residue and foreign matter from the area where the PC board and the **FPCAP** are to be joined together.
- c) Allow any detergent to dry before applying the fixative or coating.
- d) Please contact our company for fixative and coating heat curing conditions.

3. Precautions with completed board

(1) Do not directly touch the **FPCAP** terminals.

(2) Do not use electric conductors to cause a short circuit between the **FPCAP** terminals.
Do not subject the **FPCAP** to conductive solutions.

(3) Check the installation environment of the board on which the **FPCAP** is mounted.

(4) Aging of the completed board, please use the voltage below the rated voltage of the capacitor.

(5) It is recommended that the board be used at room temperature and in ordinary humidity.

For details, refer to the Operating Precaution Guidelines for the EIAJ RCR-2367C. (Safety Application Guide for fixed aluminum electrolytic capacitors for use in electronic equipment.)

No part of this publication shall be reproduced without prior written permission of the publisher.

4. If trouble should occur

(1) In the event that a short circuit causes the current to become relatively small (Radial lead type : less than approximately 3A for ϕ 10 and less than approximately 1A for ϕ 6.3), the **FPCAP** itself will generate some heat, but the appearance will not be affected even when electricity is supplied continuously. However, if there is a short circuit and the current value exceeds the above mentioned values, the temperature inside the **FPCAP** will increase.
When the temperature exceeds approximately 200°C the internal pressure will increase, and an odorous gas will be released. In this case, do not allow contact with your face and hands.

(2) If a short circuit occurs and an odorous gas is released, either turn off the device's main power or unplug the power cord from the outlet.

(3) If a short circuit should occur, it may take anywhere from a few seconds to a few minutes until an odorous gas develops, depending on the conditions. Design the device so that a power protection circuit works during this time period.

- (4) If the gas gets in your eyes, rinse them immediately. If it has been inhaled, gargle with water immediately.
- (5) When the polymer or gas of the polymer comes in contact with your skin, wash it off with soap and water.
- (6) The electrolyte, separator paper, rubber and tube used in the FPCAP are all combustible. When the current value is extraordinarily high during a short circuit, and assuming the worst possibility, the shorted-out section in the lead wire or inside the capacitor could create a spark, and cause the resin or tube to catch fire.
Give due consideration to the capacitors mounting methods, mounting positions, pattern design etc.

5. Storage conditions

Do not store capacitors without load more than a year because of potential increased leakage current.

- (1) Do not store at high temperatures and high humidity. Store it in a location that is not subject to direct sunlight and that has low temperatures and humidity (generally, temperatures between 5 and 35°C and a relative humidity of 75% or less).
(SMD type VA/VB series : Temperatures between 5 and 30°C and a relative humidity of 70% or less)
- (2) Storage period (SMD type VA/VB series)
Store in an aluminum laminated bag.
Before opening : 1 year
After opening : 1 week (Use up all the products after having opened out. Surplus products should be put into the aluminum laminated bag, and seal up.)
- (3) Baking conditions (SMD type VA/VB series)
When you use it exceeding a storage term, please carry out and use baking by the following conditions.
Temperature: 60(+0, -5) °C
Time: 168hours (only one time)
- (4) Store in an airtight plastic bag to keep the leads in good condition.
- (5) To keep the leads in good condition, store lead-type the FPCAP for no more than one year.
- (6) Do not store in places where water, salt water or oil can directly fall on them, or places where condensation may form.
- (7) Do not store in places filled with noxious gas (hydrogen sulfide, sulfuric acid, nitrous acid, chlorine, ammonia, etc.).
- (8) Do not store in places exposed to ozone, ultraviolet rays and radiation.

6. Disposal

Please treat the FPCAP as industrial waste when needing to dispose of the FPCAP.

For details, refer to the Operating Precaution Guidelines for the EIAJ RCR-2367C. (Safety Application Guide for fixed aluminum electrolytic capacitors for use in electronic equipment.)
No part of this publication shall be reproduced without prior written permission of the publisher.

Products List

Classification	Series	Note	Rated Voltage Range	Capacitance Range	Categorical Max. Temp. and Endurance	Pages
Radial Lead Type	NS	Standard	4.0 to 25V	10 to 1200μF	105°C 2000Hrs	8
	R7	Low ESR	2.5 to 16V	68 to 1500μF	105°C 2000Hrs	10
	R5	Ultra-Low ESR	2.5 to 6.3V	390 to 1500μF	105°C 2000Hrs	12
	L8	Low ESR and Low Profile (φ8)	2.5 to 35V	100 to 1500μF	105°C 2000/5000Hrs	14
	E5	Ultra-Low ESR and Low Profile (φ8)	2.5 to 4.0V	560 to 820μF	105°C 2000Hrs	16
	S8	Low ESR/ESL and Low Profile (φ6.3)	2.5 to 16V	100 to 1200μF	105°C 2000/5000Hrs	18
	F8	Low ESR/ESL and Low Profile (φ5)	2.5 to 6.3V	100 to 560μF	105°C 2000Hrs	20
	NU	Large Capacitance	2.5 to 63V	10 to 2700μF	105°C 2000/5000Hrs	22
	NE	Large Capacitance	2.5 to 16V	100 to 1200μF	105°C 2000Hrs	24
	S6	Miniature Sized Large Capacitance	2.5 to 25V	33 to 560μF	105°C 2000Hrs	26
SMD Type	HT	High Temperature (125°C)	6.3 to 20V	150 to 820μF	125°C 1000Hrs	28
	PS/PA	Standard (φ6.3 , φ8 , φ10)	2.5 to 63V	8.2 to 1500μF	105°C 2000Hrs	30
	HS/HA	Large Capacitance (φ8)	2.5 to 35V	100 to 1500μF	105°C 2000Hrs	32
	SS/SA/SB	Large Capacitance (φ6.3)	2.5 to 35V	10 to 560μF	105°C 2000Hrs	34
	FS/FA	Large Capacitance (φ4 , φ5)	2.5 to 25V	10 to 330μF	105°C 2000Hrs	36
	SL	Low Profile (φ6.3)	2.5 to 25V	15 to 330μF	105°C 2000Hrs	38
	VA/VB/VC	Molded Chip (7.3×4.3×2.8) Standard / Low ESR	2.0 to 25V	15 to 330μF	105°C 1000Hrs	40
NEW	UA/UB	Molded Chip (7.3×4.3×1.9) Low Profile / Low ESR	2.0 to 25V	15 to 220μF	105°C 1000Hrs	42

System Diagram for FPCAP

Radial Lead Type

SMD Type

FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

NS series

Features

By using Functional Polymer cathode, Frequency & Temp. characteristics are greatly improved.

- Low ESR at a high frequency range.
- High ripple current capability.
- Long life and high reliability.

Applications

- Switching Power Supply and DC/DC Converter.
- Back up Power Supplies of CPU(VRM etc.)
- Miniature high Power Supply.

Environmental Correspondence

Corresponding to Lead-free, RoHS compliance and Halogen-free.

- The Lead-free of terminal plating (Sn)

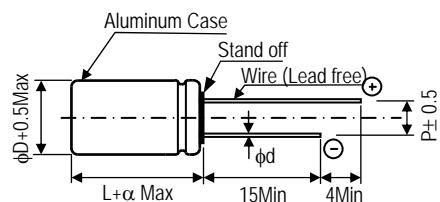

Specifications

Items	Characteristics						
	NS						
Operating Temp. Range	-55 to +105°C						
Rated Voltage Range	4.0 to 25V·DC						
Capacitance Range	10 to 1200μF						
Capacitance Tolerance	±20% (M)						
Endurance	Condition	105°C 2000Hrs at rated voltage					
	Capacitance	Within ±20% of the value before test					
	Leakage Current	Not to exceed the value specified					
	tan δ	Not to exceed 150% of the value specified					
Failure Rate	0.1% / 1000Hrs. Max (60%CL)

FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

R7 series

Features

By using Functional Polymer cathode, Frequency & Temp. characteristics are greatly improved.

- Low ESR at a high frequency range.
- High ripple current capability.
- Long life and high reliability.

Ultra Low ESR

Lead-free

RoHS Compliance

Applications

- Switching Power Supply and DC/DC Converter.
- Back up Power Supplies of CPU(VRM etc.)
- Miniature high Power Supply.

Environmental Correspondence

Corresponding to Lead-free, RoHS compliance and Halogen-free.

- The Lead-free of terminal plating (Sn)

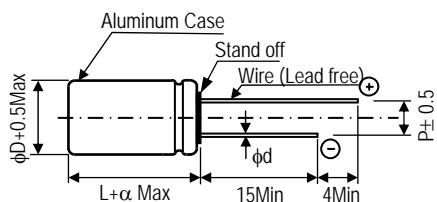

Specifications

Items	Characteristics

** Endurance 5000hrs product.

● Frequency Characteristics

● Part Number (EX) 2.5V, 820μF, 5000hrs (Endurance)

Nichicon P/N

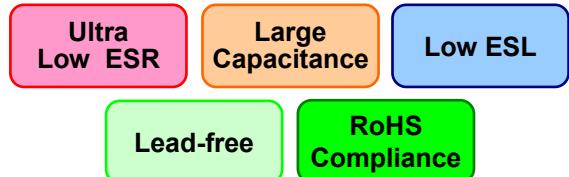

FPCAP P/N

FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

F8 series

Features

By using Functional Polymer cathode, Frequency & Temp. characteristics are greatly improved.

- Low ESR and Low ESL at a high frequency range.
- High ripple current capability.
- Long life and high reliability.

Applications

- Switching Power Supply and DC/DC Converter.
- Back up Power Supplies of CPU(VRM etc.)
- Miniature high Power Supply.

Environmental Correspondence

Corresponding to Lead-free, RoHS compliance and Halogen-free.

- The Lead-free of terminal plating (Sn)

Specifications

● Frequency Characteristics

● Part Number (EX) 16V, 100 μF Flat rubber Type (-H)

Nichicon P/N

{ CG: Cut lead (Bulk)
JT : $\phi 6.3 \times 5/6$, 2.5mm pitch taping
PX : $\phi 6.3$ 5.0mm pitch taping }

FPCAP P/N

{ R: Long lead (Bulk)
CG: Cut lead (Bulk)
JT : $\phi 6.3 \times 5/6$, 2.5mm pitch taping
P : $\phi 6.3$, 5.0mm pitch taping } { -H : Flat rubber }

FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

HT series

Features

By using Functional Polymer cathode, Frequency & Temp. characteristics are greatly improved.

- Low ESR at a high frequency range.
- High ripple current capability.
- Guaranteed at 125 degrees and high reliability.

UPGRADE

Applications

- Switching Power Supply and DC/DC Converter.
- Back up Power Supplies of CPU(VRM etc.)
- Miniature high Power Supply.

Environmental Correspondence

Corresponding to Lead-free, RoHS compliance and Halogen-free.

- The Lead-free of terminal plating (Sn)

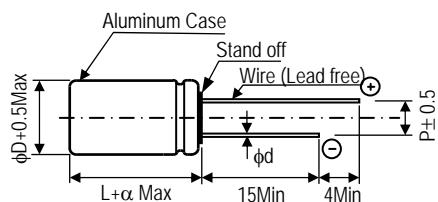

Specifications

Items	Characteristics	
	HT	
Operating Temp. Range	- 55 to + 125°C	
Rated Voltage Range	6.3 to 20V DC	
Capacitance Range	150 to 820μF	
Capacitance Tolerance	± 20% (M)	
Endurance	Condition	125°C 1000Hrs at rated voltage
	Capacitance	Within ± 20% of the value before test
	Leakage Current	Not to exceed the value specified
	tan δ	Not to exceed 150% of the value specified
Failure Rate	0.5% / 1000Hrs. Max (60%CL)

Part Number (EX) 4V, 1200 μF , PS series

Nichicon P/N

FPCAP P/N

FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

HS & HA series

Features

By using Functional Polymer cathode, Frequency & Temp. characteristics are greatly improved.

- Low ESR at a high frequency range.
- High ripple current capability.
- Long life and high reliability.

Applications

- Switching Power Supply and DC/DC Converter.
- Back up Power Supplies of CPU(VRM etc.)
- Miniature high Power Supply.

Environmental Correspondence

Corresponding to Lead-free, RoHS compliance and Halogen-free.

- The Lead-free of terminal plating (Sn)

Frequency Characteristics

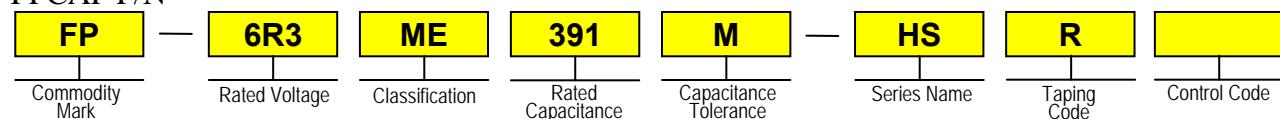

Part Number (EX) 6.3V, 390μF, HS series

Nichicon P/N

FPCAP P/N

FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

SS & SA & SB series

Features

By using Functional Polymer cathode, Frequency & Temp. characteristics are greatly improved.

- Low ESR at a high frequency range.
- High ripple current capability.
- Long life and high reliability.

Applications

- Switching Power Supply and DC/DC Converter.
- Back up Power Supplies of CPU(VRM etc.)
- Miniature high Power Supply.

Environmental Correspondence

Corresponding to Lead-free, RoHS compliance and Halogen-free.

- The Lead-free of terminal plating (Sn)

Nichicon P/N

FPCAP P/N

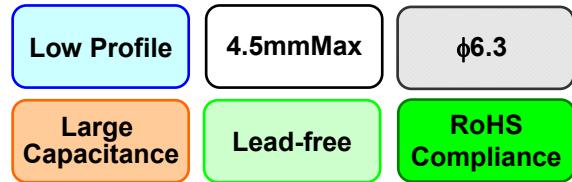

FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

UA & UB series

NEW

Features

By using Aluminum Functional Polymer.

- Low ESR at a high frequency range.
- High ripple current capability.

Applications

- Switching Power Supply and DC/DC Converter.
- Back up Power Supplies of CPU(VRM etc.)
- Miniature high Power Supply.

Environmental Correspondence

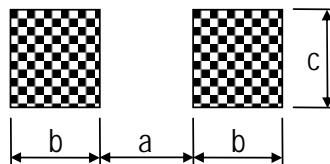

Corresponding to Lead-free, RoHS compliance and Halogen-free.

- The Lead-free of terminal plating.

Specifications

Items	Characteristic					
	UA, UB					
Operating temp. range	-55 to +105°C					
Rated voltage range	2.0 to 25V DC					
Capacitance range	15 to 220μF					
Capacitance tolerance	±20% (M)					
Endurance	Test condition	105°C, rated voltage 1000Hrs.				
	Capacitance	Within ±20% of initial value before test				
	Leakage current	Not to exceed the initial specified value				
	tan δ	Not to exceed 150% of initial specified value				
Damp Heat	Test condition	60°C, 90~95%RH, No Bias, 500Hrs.				
	Capacitance	Within +50%-20% of initial value before test				
	Leakage current	Not to exceed 300% of initial specified value				
	tan δ	Not to exceed 200% of initial specified value				
Failure Rate		0.5% / 1000Hrs. Max (60%CL)

FPCAP

Functional Polymer Aluminum Solid Electrolytic Capacitors

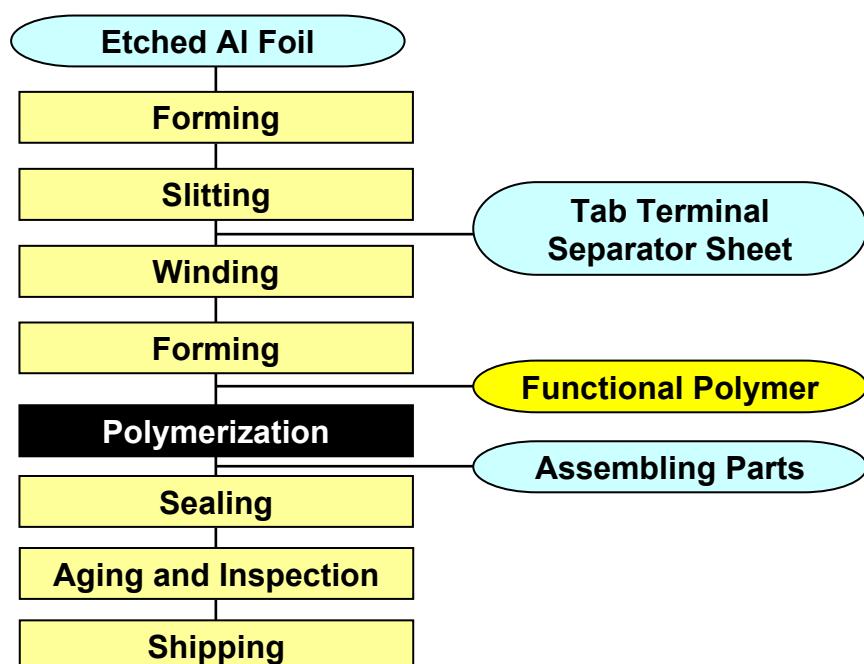

Construction and Characteristics of FPCAP

Construction of FPCAP

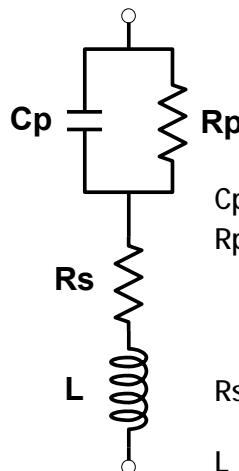

FPCAP is roughly the same construction as an aluminum electrolytic capacitor, and uses rolled aluminum foils in its capacitor element.

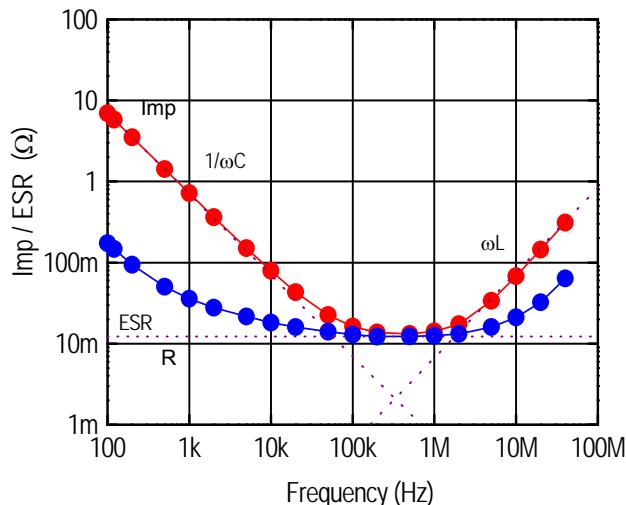

Manufacturing Process of FPCAP

Equivalent Circuit of Capacitor

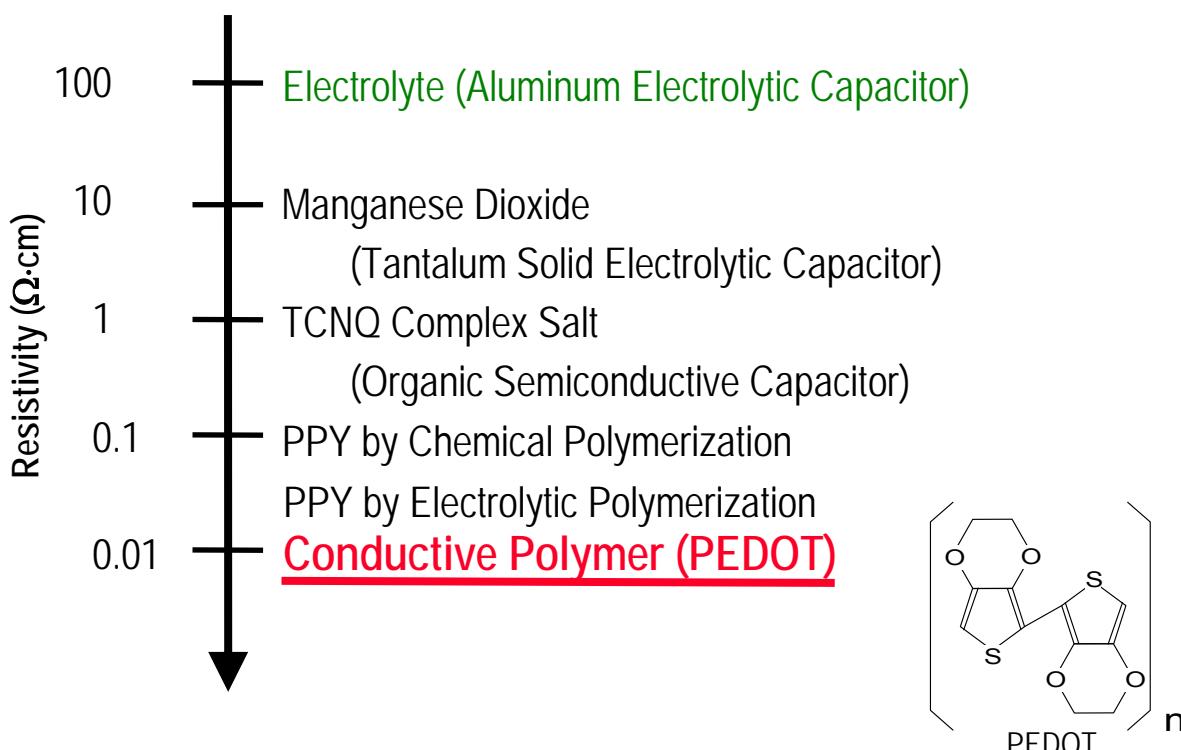

Cp : Capacitance
 Rp : Equivalent parallel resistance
 (Insulation resistance)
 (\cong Rated Voltage/LC)
 Rs : Equivalent series resistance
 L : Inductance

$$|Z| = \sqrt{\left\{Rs + \frac{Rp}{(1 + \omega^2 Cp^2 Rp^2)}\right\}^2 + \left\{\omega L - \frac{\omega Cp Rp^2}{(1 + \omega^2 Cp^2 Rp^2)}\right\}^2}$$

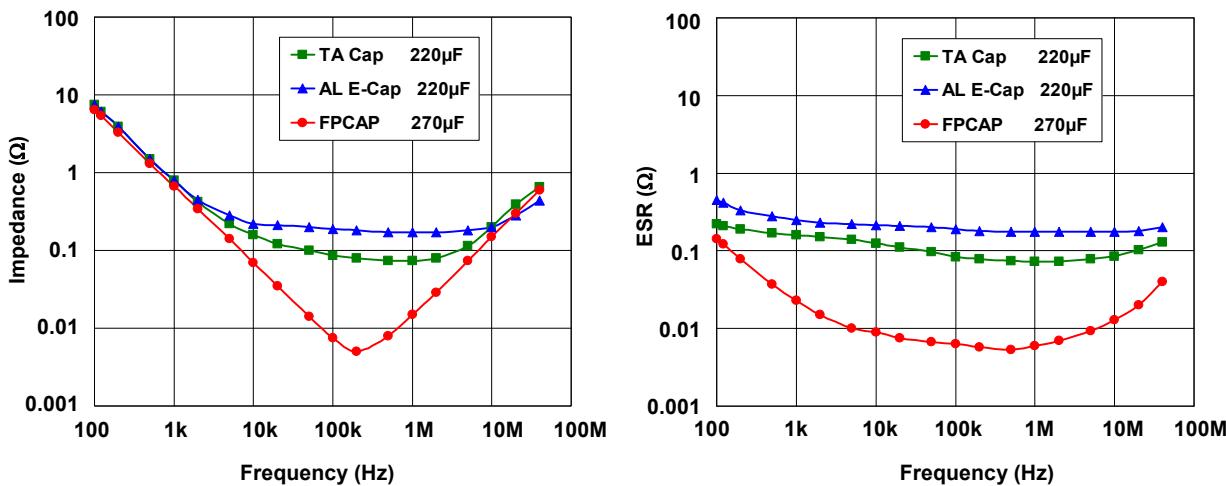

Feature of Functional Polymer

FPCAP differs from the aluminum electrolytic capacitor in that in place of the electrolyte, functional polymer is impregnated.

Typical Electrical Characteristics of Capacitors

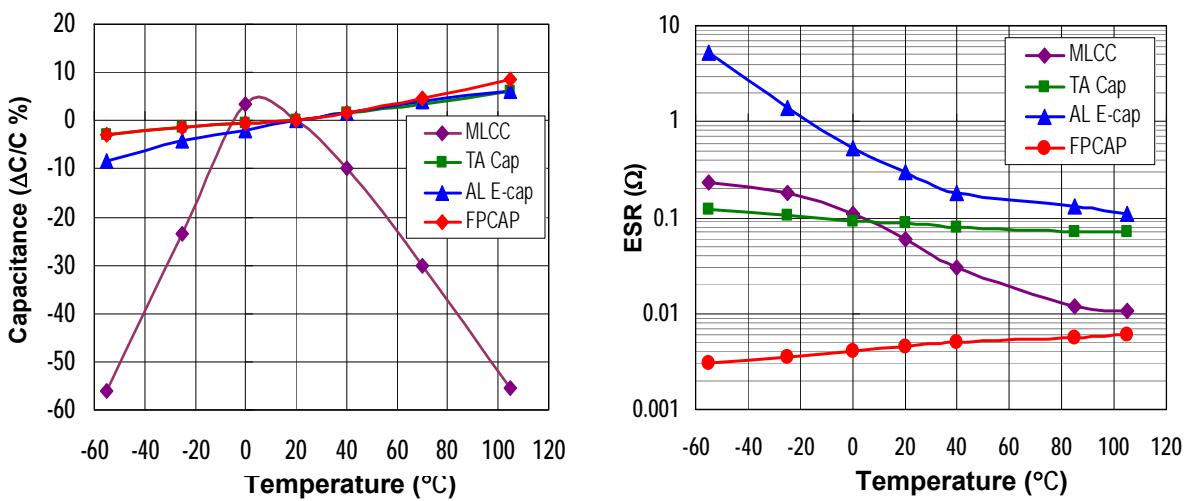

Frequency Dependence

FPCAP has excellent frequency characteristic nearly equal to the film capacitor.

Using the high conductivity of the Functional polymer with an electrolyte, and adopting the winding element for layer thinness of electrolyte, the ESR is improved greatly and has the frequency characteristic that is nearly equal to the film capacitor.

Typical Temperature Dependence of Capacitors

The temperature dependence of the FPCAP is that it features little change in temperature for the ESR.

Since ESR is dominant at high range of impedance (near resonance point), the ESR value greatly affects Noise clearing capacity.

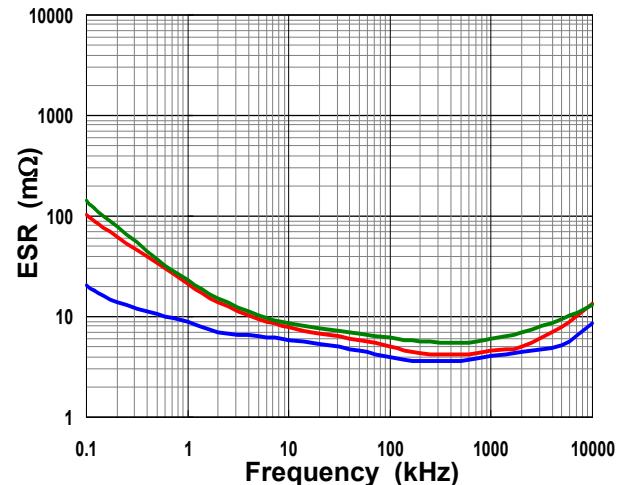

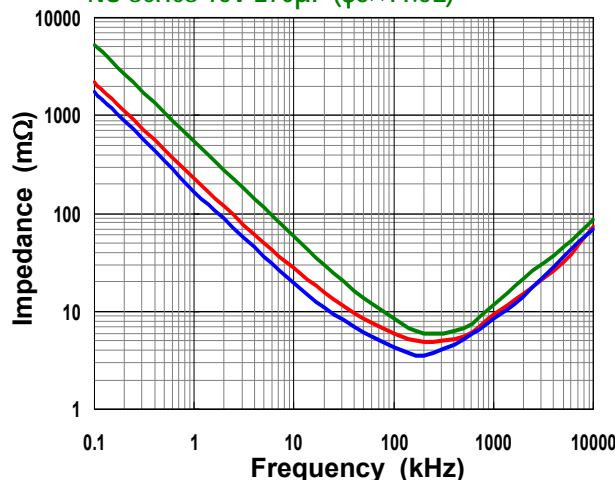

What ESR changes little against temperature means that Noise clearing ability changes little against temperature as well.

Frequency Dependence

L8 series 2.5V 560 μ F ($\phi 8 \times 8L$)

NU series 6.3V 1000 μ F ($\phi 8 \times 11.5L$)

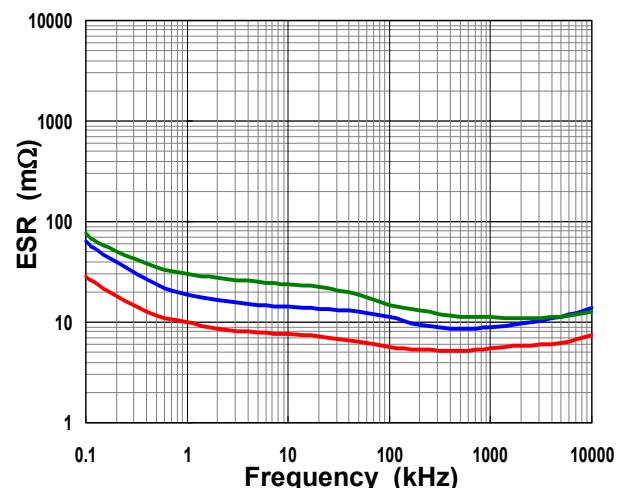

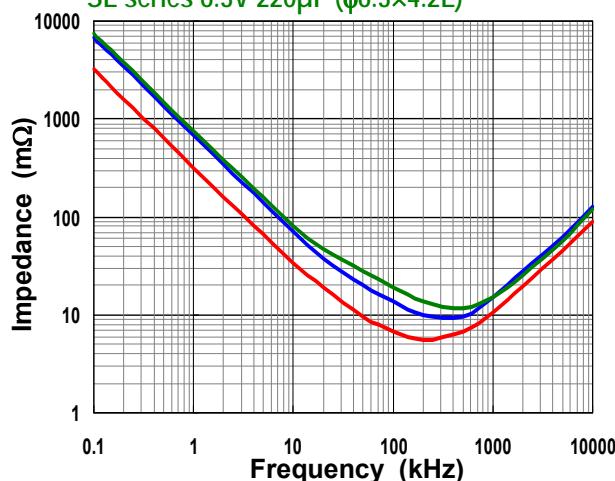

NU series 16V 270 μ F ($\phi 8 \times 11.5L$)

HS series 6.3V 390 μ F ($\phi 8 \times 6.7L$)

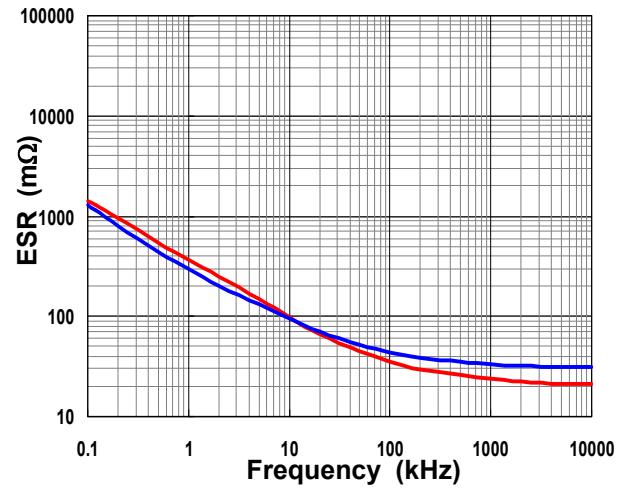

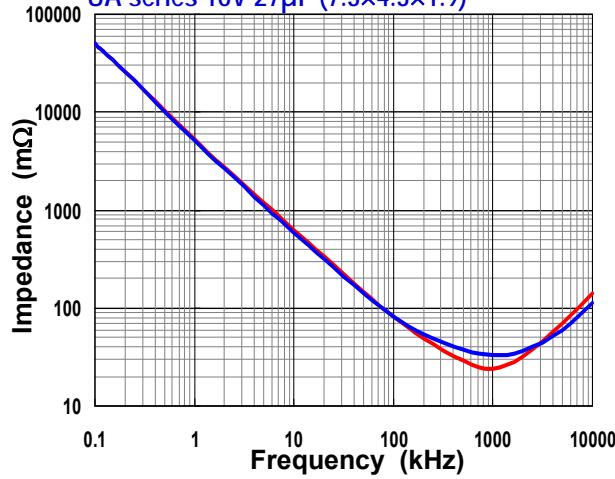

SA series 6.3V 220 μ F ($\phi 6.3 \times 5.7L$)

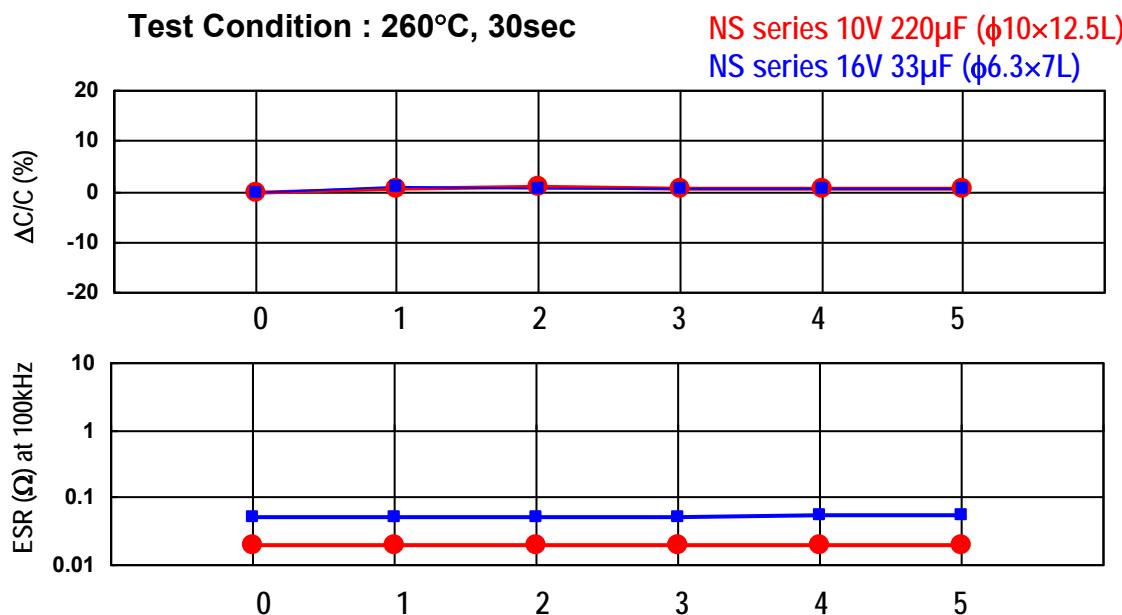

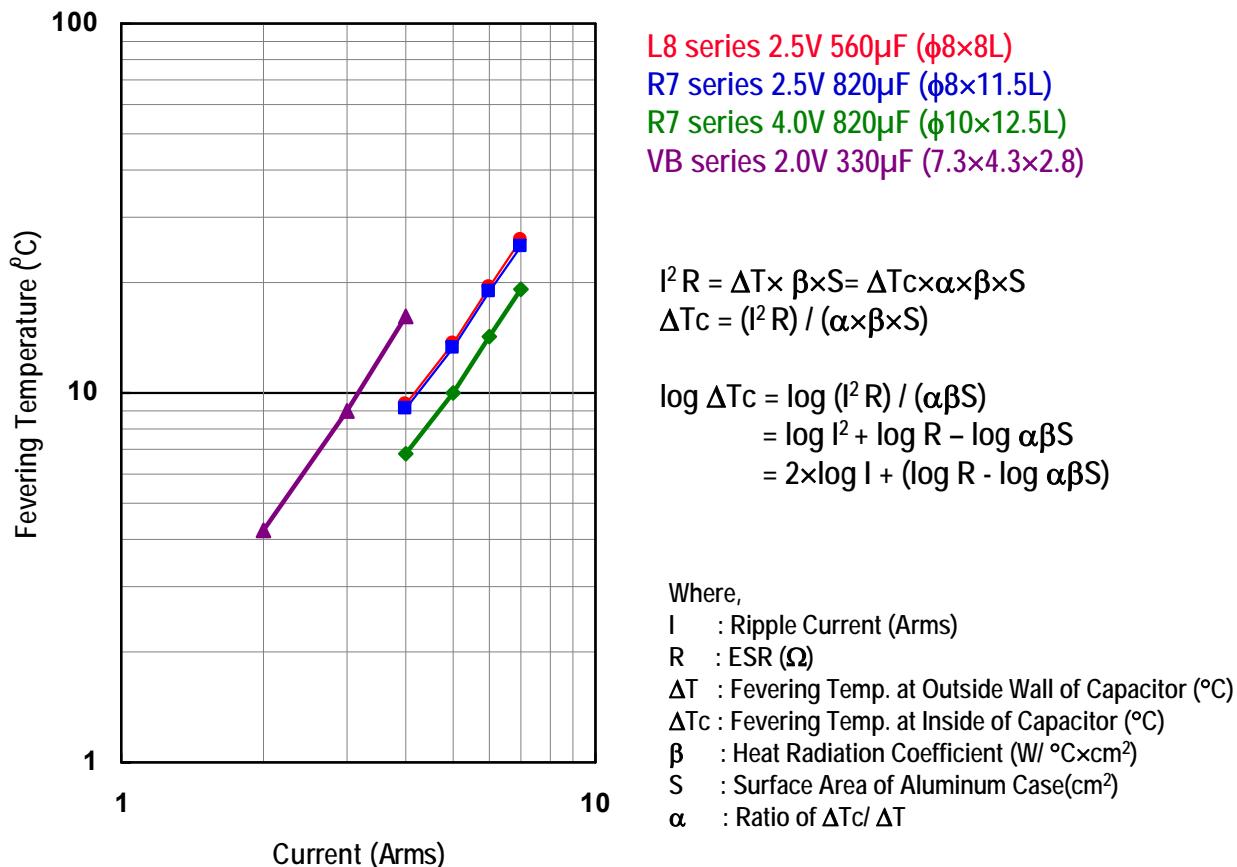

SL series 6.3V 220 μ F ($\phi 6.3 \times 4.2L$)

VA series 16V 33 μ F (7.3×4.3×2.8)

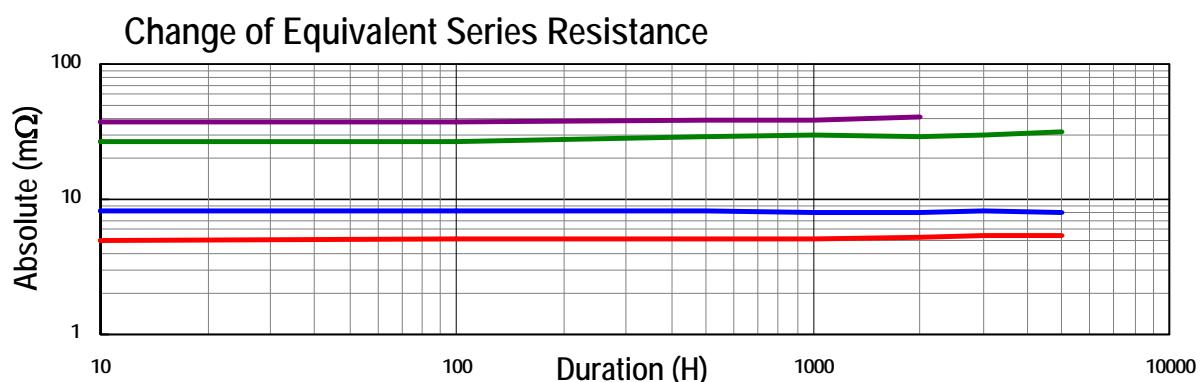

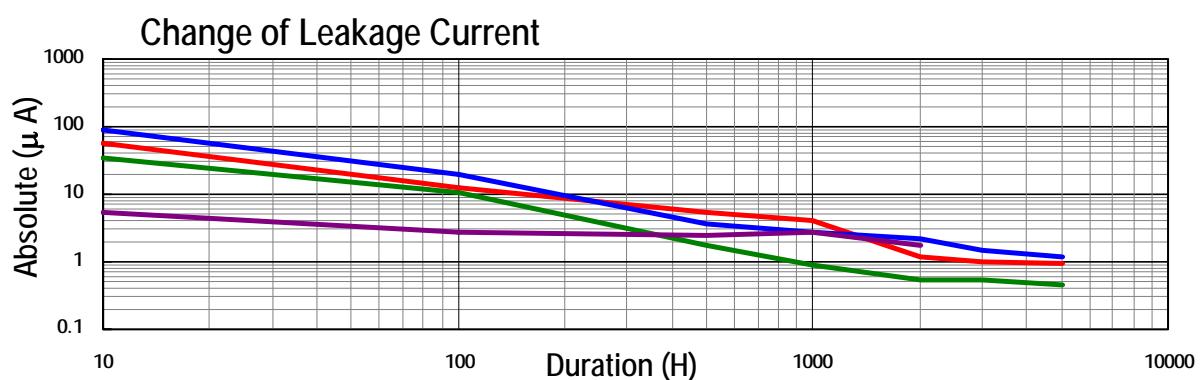

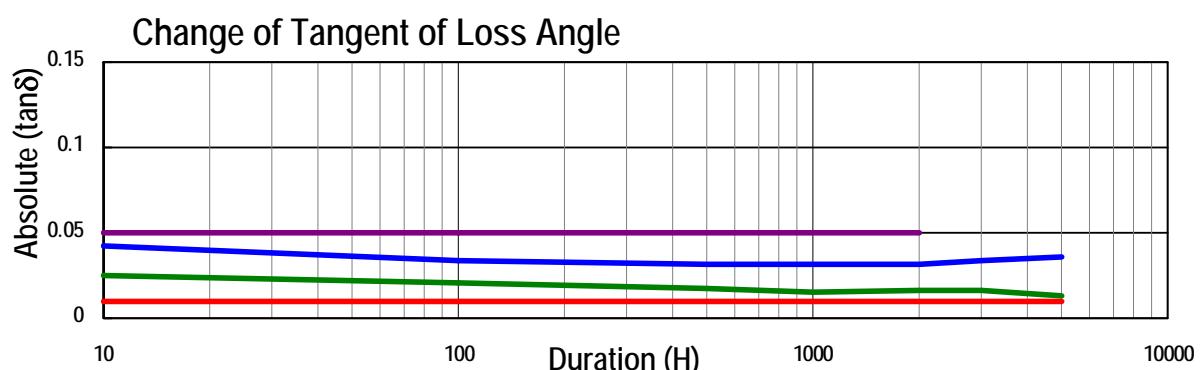

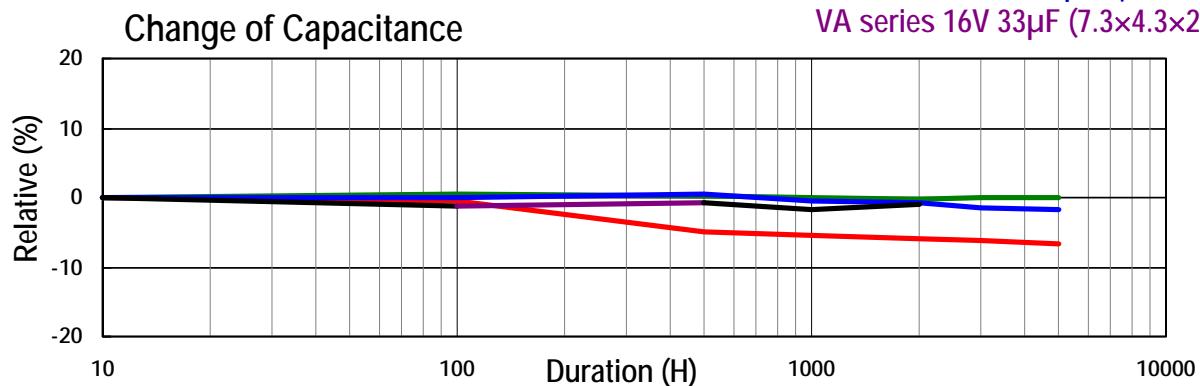

UA series 16V 27 μ F (7.3×4.3×1.9)

Resistance to Soldering Heat**Fevering Temperature by Ripple Current**

Reliability at 105°C

NS series 6.3V 47μF (φ6.3×7L)
 L8 series 2.5V 560μF (φ 8×8L)
 NS series 4.0V 1200μF (φ10×12.5L)
 VA series 16V 33μF (7.3×4.3×2.8)

FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

Calculation Formula of Lifetime For FPCAP

In general, calculation formula of lifetime of capacitors is appeared as follows.
The calculation formula of lifetime on FPCAP is same as usual Aluminum capacitor.

$$L_x = L_0 \times 10^{(T_0 - T_x)/20}$$

Where,

L_x (Hrs) = Life expectance in actual use

L_0 (Hrs) = Life time

T_0 (105°C) = Maximum operating temperature (105°C)

T_x (°C) = Temperature of capacitor in actual use

On the other hand, temperature T_x adds the circumference temperature T as the capacitor temperature and the generating temperature ΔT by ripple current.

$$T_x = T + \Delta T$$

T (°C) = Ambient temperature

ΔT (°C) = Generating temperature

There are two methods to calculate the heat rise (ΔT) of a capacitor by ripple current.

a) Measure the temperature of a capacitor in operation by means of fixing a thermocouple on the case of a capacitor or other suitable methods.

The temperature difference between the temperature measured of the capacitor and the ambient temperature is considered as the heat rise by ripple current.

b) The heat rise by ripple current is calculated by the following formula.

$$\Delta T = (I / I_0)^2 \times \Delta T_0$$

I (A rms) = Ripple current in actual use

I_0 (A rms) = Maximum permissible ripple current

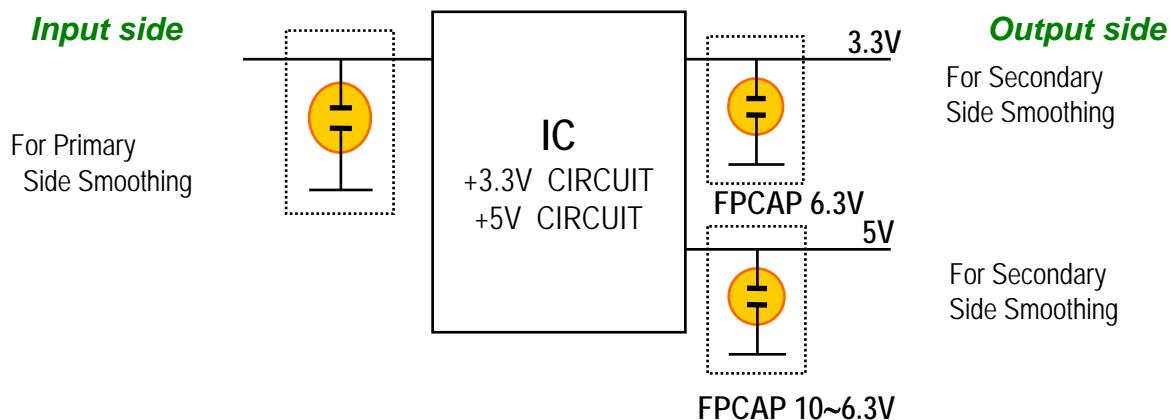

ΔT_0 (°C) = Generated temperature value by maximum permissible ripple current

[Aluminum Can Type: About 20°C, Molded Chip Type: About 10°C]

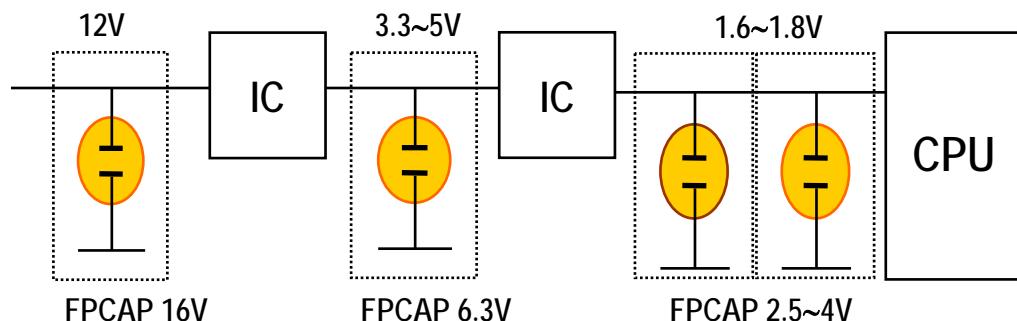

Remark:<It is recommended to use the method of formula calculation during the design phase,
and use the method of actual measurement when checking as a set.>

FPCAP Functional Polymer Aluminum Solid Electrolytic Capacitors

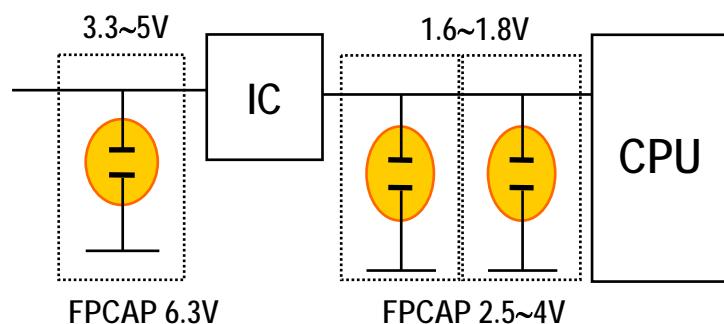

DC/DC Converter Primary, Secondary Side Smoothing

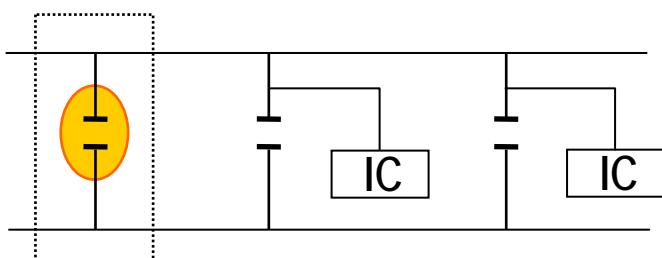

Back-up Capacitor for Variable Load (1)

Back-up Capacitor for Variable Load (2)

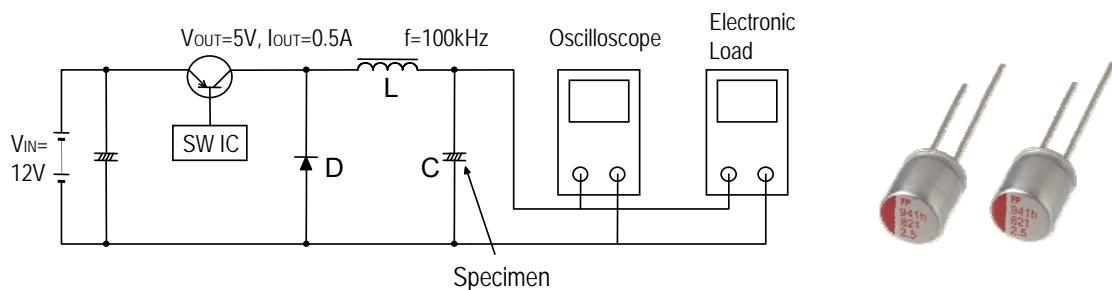

Noise Filters

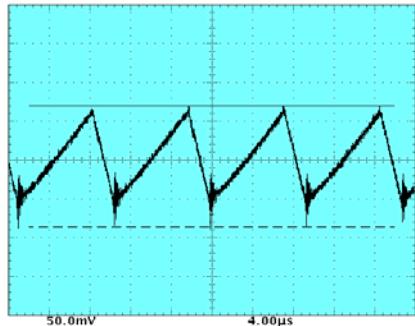

Ripple Removal Capability

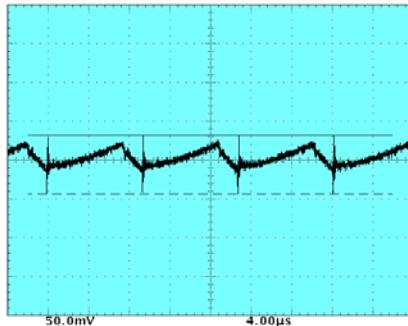

We measured ripple voltage by oscilloscope for output capacitor change on the typical chopper type DC-DC converter. (described below)

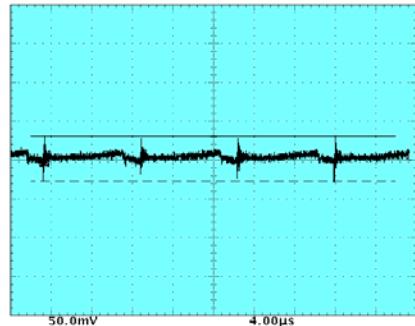

Comparison Between **FPCAP** and Other Capacitors with Same Capacitance

Low Impedance Aluminum Capacitor
16V100uF ($\phi 6.3 \times 11L$)
 $\Delta V=156\text{mV}$

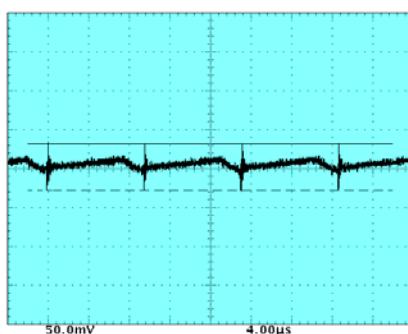

Low ESR Tantalum Capacitor
16V100uF ($7.3 \times 4.3 \times 2.9$)
 $\Delta V=76\text{mV}$

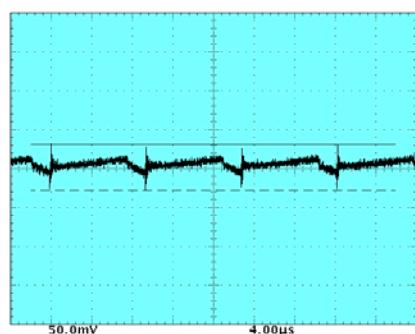

FPCAP
16V100uF ($\phi 8 \times 11.5L$)
 $\Delta V=58\text{mV}$

Examination of Same Level Residual Ripple Voltage

To obtain same level of ripple voltage to FPCAP, Low Impedance Aluminum capacitor needs 16V3300uF, even Low ESR tantalum capacitor needs 4 pcs. of same capacitance.

Low Impedance Aluminum Capacitor
16V3300uF ($\phi 16 \times 25L$)
 $\Delta V=60\text{mV}$

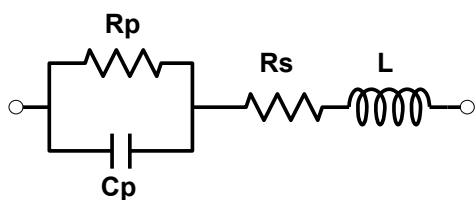

Low ESR Tantalum Capacitor
16V100uF ($7.3 \times 4.3 \times 2.9$) $\times 4$ pcs.
 $\Delta V=59\text{mV}$

CAUTION
FOR SAFETY

- TO USE NICHICON PRODUCT CORRECTLY AND SAFELY, PLEASE READ "APPLICATION GUIDELINES" VERY CAREFULLY.
- THE PRODUCTS ARE DESIGNED AND MANUFACTURED CHIEFLY FOR GENERAL ELECTRONIC APPLIANCES. IN CASE THAT YOU ARE GOING TO APPLY THEM FOR MEDICAL EQUIPMENT, AIRCRAFT / SPACE EQUIPMENT, OR THE SAME KIND THAT REQUIRES HIGH SAFETY, YOU ARE REQUESTED TO CONFIRM THEIR ADAPTATION BEFORE THE USE.
- PRIOR TO ORDERING A PRODUCT, PLEASE OBTAIN A COPY OF SPECIFICATION FROM NICHICON AND USE THE SPECIFICATION AS A BASIS WHEN DESIGNING EQUIPMENT AND INCORPORATING OUR PRODUCT. NICHICON ADMITS NO LIABILITY FOR EQUIPMENT PROBLEMS DUE TO THE LACK OF PRODUCT SPECIFICATIONS BEING CONFIRMED. ALSO, PLEASE BE SURE TO PERFORM ALL NECESSARY UNIT LEVEL EVALUATION TESTING TO AVOID MALFUNCTIONS THAT COULD BE UNFORESEEABLE DURING COMPONENT LEVEL TESTING ALONE.

- NOTE:
- SPECIFICATION AND DIMENSIONS IN THIS CATALOG ARE SUBJECT TO CHANGE WITHOUT NOTICE. IF NECESSARY, DRAWINGS CAN BE PROVIDED.
 - IN CASE THAT THERE IS A CERTAIN DANGER OF THE PRODUCTS CONFLICTING WITH THE USE AND ACTIVITY FOR THE DEVELOPMENTS OF WEAPONS OF MASS DESTRUCTION, THE PROCEDURES BASED UPON THE RELEVANT EXPORT REGULATIONLAWS ARE ABSOLUTELY NEEDED.
 - THE PRODUCTS AND THEIR PACKAGES DO NOT CONTAIN ANY OZONE DEPLETING SUBSTANCES (ODS) UNDER THE MONTREAL PROTOCOL. AND ODS IS NOT USED IN THEIR MANUFACTURING PROCESSES, TOO.
 - OTHER THAN THE EXPRESS WRITTEN SPECIFICATIONS CONTAINED IN NICHICON'S CATALOG OR OTHER NICHICON LITERATURE. NICHICON MAKES NO WARRANTY, EXPRESS, IMPLIED, OR OTHERWISE, INCONNECTION WITH THESE PRODUCTS, AND ALL IMPLIED WARRANTIES, INCLUDING THE WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PRODUCT,ARE DISCLAIMED. NICHICON SHALL NOT BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES.CUSTOMER'S SOLE REMEDY IN THE EVENT THAT NICHICON'S SPECIFICATIONS ARE NOT MET IS TO REPLACE, REPLACE,OR REFUND THE PURCHASE PRICE OF THE SUBJECT PRODUCT, AT NICHICON'S OPTION
 - CATALOG PRINTED IN DECEMBER. 1, 2012
